

# User Manual

## Set up

1. Open Terminal
2. cd to the app directory
3. type "php artisan serve" to serve the app
4. Then, it should show the port where it is served, which is 8000

## Explanation

1. Controller  
The controller is located in app/Http/Controllers/ where all of methods that will be called put.
2. Stored data  
The data is stored in a json file, which is employee.json, It is located in storage/app/public/.
3. Route  
The route is located in routes/, the file name is web.php
4. Views  
The views are located in resources/views/. I have several views, those are welcome.blade.php as the default view, view.blade.php as the page opened when the data is correct, and view-2.blade.php is opened when the data is incorrect.
